To offer products and services that maximize the activity and productivity of the machines, providing profitability, reliable and safe bucket protection systems for the mines.

### OBJECTIVE

**To offer products and services that maximize the activity and productivity of the machines, providing profitability, reliable and safe bucket protection systems for the mines.**

**Proven reliability**

MTG offers reliable and safe hammerless locking systems that provide excellent retention, minimizing the loss of teeth and offering the maximum safety to prevent operational breakages.

**Safety**

MTG provides comprehensive bucket protection systems, with entirely hammerless systems, which prevent accidents that may be caused by hammering or flying metal particles. Using MTG products is synonymous with safety, quick and easy replacement of teeth, adapters and shrouds.

**Reducing costs**

MTG products have been designed to guarantee an efficient wearing of all parts and are manufactured using the highest quality steel. This combination of design and raw materials have resulted in a longer life service of the parts, thus maximizing the operating time of the machines and generating an important reduction in the cost per ton of extracted material.

**Personalized team of technical engineers**

A specialized team of technical engineers at G.E.T. supervise, record and analyze all the data obtained from the wear process. This information will help the technical team recommend changing some of the wear parts and find the most suitable design based on the ground and working conditions.

*See the Notes section on the back cover.*
MTG Systems TwinMet is an innovative three-part system (tooth - intermediate adapter - nose) for large mining machines.

Hydraulic Excavators over 350 tonnes.

**TWINMET ADVANTAGES**

Robustness, reliability and optimization

- The design of the nose offers greater robustness to the system and more resistance in maximum tension areas.
- The large stabilization areas improve contact between parts and reduce stress.
- The fitting system allows load stresses and traction to be reduced.
- Horizontal stabilization in multiple axes leads to increased system reliability.
- Optimal adjustment between parts reduces their wear.
- Hammerless locking system: Conical pin makes assembly and disassembly of the parts easy.
- Tooth designs specific for different applications that offer a high penetration capacity and are self-sharpening.

NEW MTG SYSTEMS TWINMET
Hammerless tooth-adapter system for mining that offers optimized, robust and resistant designs for excavators and loaders.

**MTG SYSTEMS STARMET**

Increased safety, longer wear life, higher productivity and greater savings

MTG Systems StarMet includes the MTGtwist tooth-adapter locking solution, which provides:

- **Safety.** There is no chance of accidents being caused by impacts or flying metal particles.
- **Comfort.** Less effort is required when replacing teeth, compared to when a hammer is used.
- **Ease of use.** Only one operator is needed to replace the tooth.
- **Greater safety in the locking device.** Tested system that offers an excellent retention and prevents tooth loss. MTGtwist hammerless locking system.

**Adapters**

- Optimized designs that protect the weld and from lower and lateral wear and tear, increasing the wear life of the adapter. Allow reductions in the number and length of stops, generating savings in maintenance downtimes.

**Fitting system**

- Designed to provide an optimal distribution of the forces, thus obtaining the maximum resistance and robustness.

**MTGtwist locking system**

- The MTGtwist hammerless locking solution facilitates the assembly and disassembly, reducing the machine’s downtime. In normal working conditions, the pin can be reused at least twice.

**Wear parts manufactured using MTG Steels**

- They last longer and break less.

**MTGtwist Lateral Locking System**

1. Hammerless conical pin for an easier extraction.
2. Standard shaped square hole.
3. MTGtwist retainer made of Elastomet and polyurethane.
4. Plug to prevent the square hole becoming filled with soil, saving cleaning time during disassembly.

**STARMET ADVANTAGES**

- Optimized designs that are more penetrating, self-sharpening and have a greater ratio of wear material, which allows increased machine productivity.

- Optimized designs that protect the weld and from lower and lateral wear and tear, increasing the wear life of the adapter. Allow reductions in the number and length of stops, generating savings in maintenance downtimes.

- Designed to provide an optimal distribution of the forces, thus obtaining the maximum resistance and robustness.

- The MTGtwist hammerless locking solution facilitates the assembly and disassembly, reducing the machine’s downtime. In normal working conditions, the pin can be reused at least twice.

- They last longer and break less.
NEW MECHANICAL SHROUD FOR EXTREME AND HIGH IMPACT APPLICATIONS
For sizes 120 to 500, the top zone and the radius of the workpiece have been reinforced, providing more wear material, and ensuring maximum strength and protection for the adapter.

ASYMMETRICAL CAST CORNER ADAPTERS
Designed to withstand the harshest working conditions. Available for sizes 120, 180, 240 and 500. Full range of StarMet side adapters for working in all types of applications.

REINFORCED WEAR BOTTOM LEG SHROUDS
Designed to extend the wear life of the adapter in abrasive applications. Available StarMet adapter sizes 120, 180, 240 and 500.

SIDE STRADDLE ADAPTER
Scissor-type size 180 StarMet adapter for bucket edges with a 100 mm blade thickness. These adapters allow for quick, reliable installation without the need to cut the blade or the bucket edge.
Bucket protection systems for excavators and loaders, with a full range of wing and lip shrouds, and hammerless locking system.

**MTG SYSTEMS PROMET**

**WING SHROUDS**
- The top wing shrouds have been specifically redesigned for extreme and high impact applications. More stylized shrouds with improved distribution of the wear material and the contact surfaces, reducing plastic deformation.
- **Safety:** with the MTGTwist hammerless locking system, optimal locking is ensured on the most aggressive of applications avoiding possible accidents during assembly and disassembly.
- **Comfort:** less effort is required than with traditional systems with a hammer.
- **Easier and faster:** changing the system’s elements can be completed much easier and more quickly.
- **Excellent retention:** the pin retention system always keeps the pin in its initial position, avoiding shroud loss. Optimum support in the most aggressive applications.

**Blade shrouds**
- **Safety and reliability of the system** thanks to the MTGTwist hammerless locking system.
- **The design of the lip shrouds has been specifically optimized** and is able to offer up to 30% more wear material in comparison with the equivalent model from the competition.
- The shrouds reduce blade exposure to impacts and abrasions, increasing the bucket’s wear life.
- The fitting system only requires welding a base for each shroud, thus making installation easy and quick while reducing machine downtimes.
- **Optimized design of the locking device elements,** improving the contact and stability of the parts.

**PROMET ADVANTAGES**

Greater protection, safety, comfort and speed

Full range of wing and lip shrouds for excavator and loader buckets.

- **Wing shrouds**
  - The top wing shrouds have been specifically redesigned for extreme and high impact applications.
  - More stylized shrouds with improved distribution of the wear material and the contact surfaces, reducing plastic deformation.
  - **Safety:** with the MTGTwist hammerless locking system, optimal locking is ensured on the most aggressive of applications avoiding possible accidents during assembly and disassembly.
  - **Comfort:** less effort is required than with traditional systems with a hammer.
  - **Easier and faster:** changing the system’s elements can be completed much easier and more quickly.
  - **Excellent retention:** the pin retention system always keeps the pin in its initial position, avoiding shroud loss. Optimum support in the most aggressive applications.

- **Blade shrouds**
  - **Safety and reliability of the system** thanks to the MTGTwist hammerless locking system.
  - **The design of the lip shrouds has been specifically optimized** and is able to offer up to 30% more wear material in comparison with the equivalent model from the competition.
  - The shrouds reduce blade exposure to impacts and abrasions, increasing the bucket’s wear life.
  - The fitting system only requires welding a base for each shroud, thus making installation easy and quick while reducing machine downtimes.
  - **Optimized design of the locking device elements,** improving the contact and stability of the parts.
MTG PROMET, FULL RANGE OF SHROUDS FOR MINING MACHINERY

WING SHROUDS FOR HEAVY MINING APPLICATIONS, DESIGNED SPECIFICALLY FOR EXCAVATORS AND LOADERS.

Wing shrouds for Heavy Mining.

Lip shrouds for loaders.

Lip shrouds for excavators.

MTG PROMET MECHANICAL WING AND LIP SHROUD RANGE

Wing shrouds for excavators and loaders with 30-60mm wings.

For abrasive applications with a medium high impact level.

“Heavy” wing shroud

For excavators and loaders with 60mm to 140mm wings.

For high abrasion/impact applications.

Central lip shroud

Protects the bucket blade in excavators and loaders.

ACCESSORIES

Weldable base for ProMet wing shrouds

Weldable base for ProMet “Heavy” wing shrouds

Weldable base for ProMet lip shrouds

Mechanical block for lip shrouds

MTG PLUS RANGE OF WELDED AND BOLT-ON WING, CORNER AND LIP SHROUDS

Heel shrouds

Protect the corner of the bucket and adapt to its curvature.

Range that covers excavators from 20 to 300 tons.

Welded blade shrouds

Welded blade shrouds for excavators in multiple applications. Range which covers blade thicknesses of 40mm to 120mm.

Bolt-on blade shrouds

Bolt-on half arrow blade shrouds for Caterpillar loaders which work in abrasive applications.

**See the Notes section on the back cover.
MTG SYSTEMS STARMET ROPE SHOVELS

Teeth, adapters and shrouds for electric rope shovels. Wear parts with mechanical locking system to equip the most widely used lip fitting configurations for electric rope shovels.

ROPE SHOVELS ADVANTAGES

Increased reliability, comfort, speed and safety

Wide range of Whisler\textsuperscript{(1)} and Wide Radius\textsuperscript{(1)} type adapter and shrouds for electric rope shovels and teeth specifically designed for this type of machinery.

**Tooth**
- Specific tooth design with advanced self-sharpening, offering the perfect balance between penetration and resistance to abrasion. New range of teeth that are stronger and with more wear material which guarantee increased bucket productivity with these machines. MTG Systems StarMet uses the MTG\textregistered twist hammerless locking solution. A proven solution that makes attaching and removing teeth reliable, easier, faster and safer.

**Adapters**
Electric shovel adapters have been designed with the StarMet tooth-and-adapter fitting system and a conventional two or three-part lip locking system.

**Wear caps**
- The adapter allows the use of wear caps where necessary. Different wear cap designs are available, depending on the soil abrasion level and type of application.

**Shrouds**
- The wing and lip shrouds allow for complete bucket protection. The robust design extends the wear life of the bucket and its productivity.

MTG SYSTEMS RIPMET

Patented wear parts for Bulldozers that provide a longer wear life and optimum penetration.

Bulldozers in quarries and mining jobs.

RIPMET ADVANTAGES

Providing greater wear life and optimal penetration

When other rippers on the market need replacing, RipMet teeth keep working with excellent penetration

- The shorter shape of the adapter nose has had a positive effect on the performance of the adapter.
- The teeth have a higher percentage of wear material, which increases their wear life.
- The teeth’s longer self-sharpening channel maintains the penetration until the end of their life.
- The shroud protects and optimizes the penetration of the arm durably, preventing the wear on the central nerve to the maximum.
- The components of the RipMet are fully integrated into the system, improving material flow and optimizing the penetration.

Excellent resistance on the toughest applications

The stability of the fitting system better distributes the forces when working, minimizing breakages even on the toughest applications.
- The stabilization surfaces of the fitting system guarantees improved distribution of forces while working and keep the tooth firmly in place. This stability minimizes breakages, even in the most extreme applications.
- The fitting system stops the impacts from being transmitted to the locking devices, preventing the pin from bending or breaking.

Safety and ease when changing teeth

MTG Systems RipMet wear parts use the MTGTwist hammerless locking solution which offers the following advantages during tooth and shroud changing operations:
- Safety: the fact that no hammer is required prevents accidents due to flying metal particles.
- Comfort: less effort is required than with traditional systems with a hammer.
- Easier and faster: changing the elements of the system can be completed much easier and more quickly.

When working: excellent retention. The pin retention system ensures it always remains in its initial position.

MTG PLUS LHD LIP SYSTEM

Welded lip shroud system for low-profile Underground Mining Load-Haul-Dump Loaders that maximize bucket penetration and machine productivity.

Low profile loader in underground mine jobs.

MTG PLUS SYSTEM WELDABLE LHD LIP SHROUD RANGE

LHD LIP SYSTEM ADVANTAGES

Maximum penetration and productivity

Streamlined design that optimizes bucket penetration and reliability
- The new “Ultra slim” streamlined design has been specifically optimized for LHD loaders, maximizing penetration in underground mines and avoiding the accumulation of materials typical to other wide designs.

Produced with the new steel alloy MTG Steels
- The new steel alloy, MET73W, developed to the strictest quality controls (including AOD process control) to maximize the hardness and protection of the bucket without losing the weldability of steel.

Self-sharpening of the shroud that increases wear life
- The design of the weldable LHD blade shrouds has been specifically optimized to stay sharp throughout the progressive loss of wear material, maintaining penetration capacity for longer.

Reduction of fuel and tire consumption
- The “ultra slim” shroud design considerably increases bucket penetration, reducing fuel consumption and tire wear.
